4. Last step! Will be to agree to our terms and conditions once you have selected the verification link.
5. Complete! You can now view your account information and statements online!

Your heat and hot water bills explained

Your bills give you information about your utilities and how much you've spent. It shows how we work out what you've used, what it has cost you and summarises your account.

When you have multiple utilities, your statement may be longer than that's because we provide a breakdown for each utility, as well as a summary.

Have a look at our example utility statement for help understanding your account:

- 1. Balance Brought Forward:** This was the balance as of your last bill.
- 2. Payments Made:** Payments we received during the **Billing Period (6)**. If you made a payment after/before the billing period it will not show.
- 3. Account Number:** Your account number can be used to set up an online account.

Supply address:
New York House
1 Harper Street
Leeds
LS7 2EA

Your consumption details

Supply	Meter Serial Number	Start Meter Read	Start Reading Date	End Meter Read	End Reading Date	Consumption
Heat & Hot water	12345678	86845.0	15/04/22	86899.0	16/05/22	54.0 kWh

Your tariff details

Charge Name	Charge Rate	VAT Rate
HHW unit charge	£00.0601 per kWh	5.0 %
Daily availability charge	£00.5460per day	5.0 %

Who sets my tariff and charges?

Your tariff is set by your heat network operator, who employ mySycous to provide a meter management and consumer charging solution. We do not set your tariff.

The tariff is designed to cover the cost of providing your heating and hot water supply in the fairest possible way to recover both the variable and fixed costs.

You have to pay fixed costs even if you do not use the heating and hot water supply because this covers the cost of providing the supply.

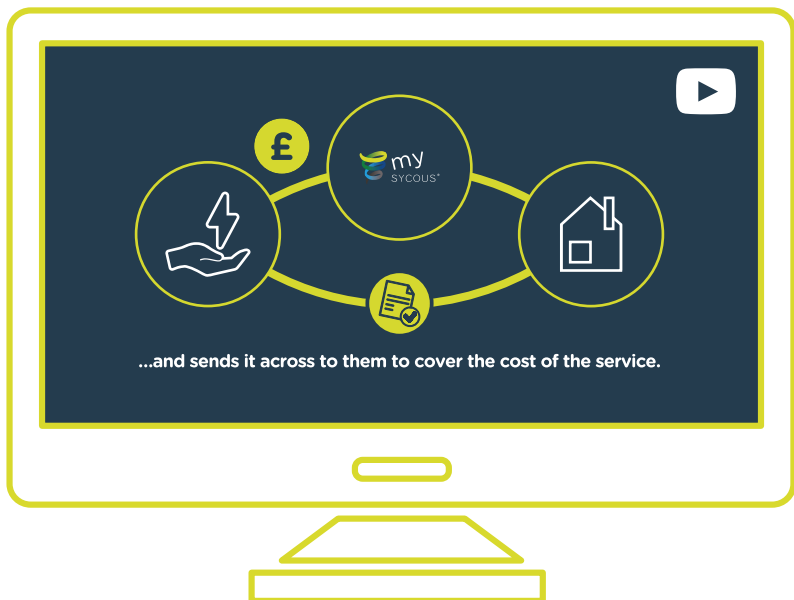

We do like to support consumers and will help explain a tariff as much as possible, just get in touch with our team. If we're not able to help, we're happy to put you in touch with the right person.

What is a Heat Tariff? video

We have some simple ideas on how you can save energy!

We all have heard about the energy crisis, which is affecting people across the UK.

We also know that keeping warm is important for people's health, which is why using your heating and hot water, but reducing usage where you can is very important.

You can get independent energy saving advice from the Energy Saving Trust (energysavingtrust.org.uk).

Not all energy saving ideas are technically possible and you should ensure you have permission to make any alterations, if necessary.

We have some simple ideas on how you can save energy, including:

- » Regularly check your consumption using your online account to see the impact small changes can make to your consumption (and costs!). If you would like to register for an online account today, please visit mysycous.com.
- » Make sure you turn your heating off when opening windows to avoid wasting energy - it's like letting money escape out of the window!
- » Use your heating controls, such as turning radiators off in rooms that you don't use as often, maybe in your kitchen which you might use only for cooking.
- » Only fill the kettle with the amount of water you need. Measuring water in mugs rather than straight from the taps is an easy way to do this!
- » Make sure you don't leave the tap running! Leaving the tap running for a couple of minutes can waste up to 15 litres of water – more than you ought to drink in a week!
- » Remember to turn off the lights when you leave the room and only turn on the lights that you need.
- » Turn your washing machine down to 30°C or lower for an eco-friendly laundry cycle just make sure you still follow any specific washing instructions.
- » Replace your light bulbs with high efficiency LED light bulbs in all your lights and lamps.
- » Switch your appliances off standby or use plugs which can automatically switch-off your appliances when not being used.
- » Don't leave your computer or mobile device charging overnight, they generally take less time than this and it uses more electricity than your device needs.
