

Role Description

Company	Sycous Limited	Team	Development
Job Title	Junior Software Developer	Mentor	Lead Developer
Start Date	ASAP	Role Type	Full Time/Permanent
Role Purpose			
<p>We are looking for an enthusiastic developer, with an ambition to learn, to join our in-house development. The team currently work to develop and support our software for remote meter reading, billing, account and energy management, and engineer scheduling. This software is currently used across the UK, in Sweden and the UAE with plans to continue growth into other international markets in the next few years.</p> <p>The role will involve feature development, bug bashing, UI design and documenting for our SaaS (Software as a Service) platforms. There are will also be opportunities available for Mobile App development and DevOps exposure.</p> <p>You will be exposed to the full cycle of development, from specification and user story generation, through to planning, implementation and deployment.</p> <p>You will work as part of project groups using Extreme Programming principles such as TDD (Test Driven Development) pair programming and continuous integration.</p> <p>You should have a genuine and enthusiastic interest in learning and experimenting with new technologies.</p> <p>We are a very cohesive development team that will support you both personally and technically throughout your role at Sycous.</p> <p>The role will be based out of the Sycous Leeds office with the occasional requirement to travel nationwide to attend and support at client meetings.</p> <p>For further information on Sycous and our product range of metering and data collection solutions, please visit www.sycous.com</p>			
1Responsibilities			

- Staying up to date with new technologies and sharing your opinions with the rest of the team
- Developing ideas and insightful solutions to problems with team members
- Ensuring and assisting in making sure systems are developed efficiently and operate effectively
- Attending meetings with the team to plan and review work
- Supporting in coding for more complex areas of the system
- Ensuring that the team understand and learn from bugs and inefficiencies that are highlighted during testing or from client feedback in production software.
- Helping to support in delivery against complex and time constrained projects
- Proactively suggest improvements to the software or features that can enhance the overall quality of products
- Understand and contribute to detailed technical specifications and user stories
- Prototype and test iterations of products and new feature changes

Reporting office: Leeds

Based: Leeds, travel may be required for training or other support tasks in very limited circumstances with potential overnight stays.
